#### Introduction..

The common cold is a viral infectious disease that infects the upper respiratory system. It is also known as acute viral rhinopharyngitis and acute coryza. It is the most common infectious disease in humans and is mainly caused by coronaviruses or rhinoviruses.

Because there are more than 200 viruses that cause the common cold, the human body can never build up resistance to all of them. This is why colds are so common and often return. According to the CDC (Centers for Disease Control and Prevention), adults get 2-3 colds per year, and children may have up to 12 per year.

The common cold is contagious; it can be spread by air droplets from coughs and sneezes and by touching infected surfaces. It is contagious from 1-2 days before symptoms begin until the symptoms have stopped.

Here are some key points about colds. More detail and supporting information is in the main article.

- Common cold symptoms include dry or sore throat, blocked or runny nose, and sneezing.
- Around a quarter of people do not experience symptoms when infected with a cold.
- Up to half of common colds are caused by a group of viruses referred to as rhinoviruses.
- Complications of the common cold include acute bronchitis and pneumonia.
- People with lung conditions such as asthma and chronic obstructive pulmonary disease are more vulnerable to colds than other people.

Alter your and the state of the

There is no drug to cure the viral infection causing Cold in allopathy.

#### Ingredients:

- Beeswax
- Coconut oil (optional)
- Extra-virgin olive oil
- Double boiler (optional)
- Peppermint essential oil or menthol
- Eucalyptus essential oil
- Clove oil
- Herbs: wintergreen, Nirgundi (optional)
- Turmeric
- Camphor

#### Methodology

- Step-1--Mix together and heat 1/2 ounce of beeswax and approximately 2 ounces of coconut or extra-virgin olive oil in a double boiler, or place a small saucepan inside another to make your own double boiler. Place water to heat in the bottom pot or pan, and place smaller saucepan for mixed ingredients like ginger and turmeric inside that one. Heat this mixture over low heat, stirring constantly until it's melted. Then remove from heat.
- Step 2--Add approximately 10 drops each of peppermint or menthol and eucalyptus oils and about five drops of clove oil. Mix and stir these essential

oils into the beeswax and olive oil mixture thoroughly. Allow the heated mixture to cool for several minutes.

- Step-3Add fresh herbs to the mixture if you desire. Herbs such as garden sage, wintergreen, nirgundi and 10 tablets of camphor are effective in the treatment of aching muscles and joints, says Project Aware. Boil roughly 1 tablespoon herbs (or more if you wish) in a pint of water. Boil for several minutes until liquid is reduced by half.
- Step 4-Strain the herbs from the water infusion, and add desired amount of infused herbal water into the mixture of beeswax and olive oil. Heat this mixture until the water has evaporated. Allow the mixture to cool for five minutes.
- Step 5-Pour the oil mixture into a clean, medium-size glass or metal container. Let stand until completely cooled.
